

## Filing of ERP print-outs directly in SuperOffice

### ERP Filer For SuperOffice

#### Find printouts from the ERP system directly in SuperOffice CRM

ERP Filer transfer documents like invoices, order confirmations, inventory lists etc, from the ERP system to SuperOffice CRM.

This enables salespersons to view what has been sent to their customers even if they are travelling or working from home.

With ERP Filer it is possible to decide what information is to be transferred to SuperOffice CRM.

Every time a document is printed from the ERP system, an electronic copy is created and stored in SuperOffice CRM as a normal SuperOffice CRM document. The format can be anything from HTML, PDF, BMP to TIF, depending on the complexity of the document coming from the ERP system.

Adwiza ERP Filer creates a log, containing all transactions, and features an advanced error correction procedure to be used for support.

After installation on the SuperOffice CRM server the ERP Filer module transfer all the selected documents to the SuperOffice CRM document archive.

Hence, SuperOffice CRM will be updated with the latest data from the ERP system.

ERP Filer does not depend on a specific ERP system, but is typically sold together with the modifications, that are to be made in the present ERP system.

The code generating the documents is open, enabling your present ERP system supplier to customize the solution to fit your needs.

#### System requirements

ERP Filer supports all current Navision ERP systems, as well as, several other systems.

Check our website to see a list of tested systems.
